Bv8

The present invention relates to a screening method for compounds for their ability to modify the binding of G-protein coupled receptor (GPCR) protein ZAQ and related proteins (human ZAQC, human ZAQT, rat ZAQ1 (rZAQ1), rZAQ2, human and mouse ISE (mISB) receptor, and mouse GPR33) to their ligands (the mature form of human, mouse or rat Bv8 protein). The receptor protein and ligand are contacted in the presence or absence of the test compound. The compounds are useful in a drug composition for the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention comprises a method for producing an active peptide that has the same activity as a ZAQ ligand isolated from eukaryotic cells. The method of the invention is useful for the production of a physiologically active ZAQ ligand for use in preventing or treating digestive diseases (e.g. colitis and diarrhea). The present amino acid sequence represents a human physiologically active ZAQ ligand-related protein
                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Industrial production of physiologically-active ZAQ ligand by expressing in transformant prokaryote and refolding in redox buffer, for use in preventing or treating digestive diseases e.g. colitis and diarrhea.
treatment, and prevention of digestive and central nervous system (CNS) disorders, including bowel inflammation, diarrhoes, constipation, food absorption disorders, Alzheimer's disease, Parkinson's disease and schizophrenia. The present sequence represents a GPCR or related protein
                                                                                                                                                                                                                                                         9

Polypeptides of the invention are useful for treating disorders involving impaired gastrointestinal motility. They are useful for stimulating gastrointestinal motility in disorders such as irritable bowel syndrome, diabetic gastroparesis, postoperational ileus, chronic constipation and gastrointestinal reflux disease. The prokineticin antagonists are useful for inhibiting gastrointestinal motility in conditions of diarrhoea, malabsorptive disorders, inflammatory bowel disorders, inflectious diseases and intestinal cancers. The antagonists also act as analgesics. The present sequence is human prokineticin 2 mature protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated human prokineticin 1 and 2 polypeptides that stimulate gastrointestinal smooth muscle contraction, useful for improving impaired gastrointestinal motility in irritable bowel syndrome, chronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AVITGACDKDSQCGGGMCCAVSIWVKSIRICTPMGKLGDSCHPLTRKVPFFGRRMHHTCP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; prokineticin 2; PK2; circadian rhythm; modulation; drug screening; circadian rhythm disorder; non-24-hour sleep-wake syndrome; rapid time-zone change syndrome; jetlag; work-shift syndrome; delayed phase sleep syndrome; advanced sleep phase syndrome;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a novel angiogenesis inhibitor comprising a compound that inhibits the activity of an amino acid sequence given in the specification. Angiogenesis-related proteins Bv8, ZAQ and ISE were utilised within the method of the invention. The molecules of the invention demonstrate cytostatic and antiinflammatory activities whilst the method may be useful for treatment and prevention of cancer, ovarian diseases, diabetic retinopathy and inflammatory disease. The current sequence is that of the human Bv8-related protein of the invention.

The invention relates to a method of screening for a compound for its ability to modulate circadian rhythm. The method involved determining the ability to modulate circadian rhythm. The method involved determining the condulate one or more indicia or circadian rhythm function. The compound is identified as being a PK2 receptor agonist or antagonist to modulate one or more indicia or circadian rhythm function. The compound creation of PK2 and a receptor selected from the PK2 receptor (e.g., ADO05355) or the PK2 and a receptor (e.g., ADO05355). The invention is based on the findings that PK2 expression in that PK2 receptor activation modulates circadian rhythm in rats. The invention also relates to a method of modulating the circadian rhythm of an animal by administration of a PK2 receptor antagonist; a composition comprising a detectably labelled PK2 and an isolated mouse CC apk2 sene promoter (ADO05365-ADO05369) operably linked to a heterologous creation rhythm and for the light regulated expression of a nucleotic sequence; use of such constructs to identify modulators of circadian rhythm and for the light regulated expression of a nucleic acid modulating such an animal, and oligonucleotides at least 17 bases in length completed in an animal, and oligonucleotides at least 17 bases in length completed which are able to hybridise to the human PK2 promoter ADO05365. The modulating circadian rhythm are alser and PK2 promoter ADO05365. The modulating circadian rhythm and PK2 promoter ADO05365. The modulating circadian shiph are alser and PK3 receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         antagonists which promote sleep, and PKZ receptor agonists which promote alertness. The circadian rhythm modulators may be used in the treatment of circadian rhythm disorders such as non-24-hour sleep-wake syndrome, rapid time-zone change syndrome (jetlag), work-shift syndrome, delayato phase sleep syndrome, advanced sleep phase syndrome, irregular sleep-wake pattern syndrome, syndrome associated with decreased amplitude, and seasonal affective disorder. They may also be used for modulating biological rhythms with a periodicity of less than 24 hours (ultradian rhythm) such as daydreaming, urination or hunger, or those with a periodicity of more than 24 hours (infardian rhythm) such as sexual receptivity (heat) in female animals. The present sequence represents the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The specification describes a method for identifying a compound that modulates neurogenesis. The method comprises providing a compound that modulates prokineticin receptor (PRR) signaling, contacting a neural stem corporates prokineticin receptor (PRR) signaling, contacting a neural stem or progenitor cell with the compound, and determining the ability of the neurogenesis or for identifying compounds that modulate neurogenesis. These are used for both ex vivo or in vivo therapeutic applications where neural regeneration is desirable, such as in Alzheimer's disease, parkineno's disease or other debilitating neurodesenerative diseases. The parkineno's disease or other debilitating neurodesenerative diseases. The parkineno's disease or the debilitating neurodesenerative diseases. The may be used in the method of the invention to modulate neurogenesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Identifying a compound that modulates neurogenesis comprises contacting a neural stem or progenitor cell with a compound that modulates prokineticin receptor signaling and determining its ability to modulate neurogenesis.
                                                                                                                                                                                                                                                                                                                             neurogenesis, prokineticin receptor; PKR; neural stem; progenitor cell; neural regeneration; Alzheimer's disease; Parkinson's disease; neurodegenerative disease; prokineticin 2; PK2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 AVITGACDKDSQCGGGMCCAVSIWVKSIRICTPMGKLGDSCHPLTRKVPFFGRRMHHTCP

the invention relates to a monoclonal antibody (I) having high avidity to human ZAQL-1 ligand polypeptides, comprising either of two fully defined sequences of 86 amino acids (S1). (I) is ZL1-107a or ZL1-234 a produced comparing of 86 amino acids (S1). (I) is ZL1-107a or ZL1-234 produced comparing out assay of the polypeptide containing (S1) which involves reacting (I) with the test-liquid containing the polypeptide or its salt, and measuring the ratio of the polypeptide bound to (I). (I) is useful as a diagnostic or therapeutic agent for diagnosis and/or treatment of diseases such as endometrial cancer, endometriosis or convlation disorders, digestive diseases, diseases associated with angiogenesis, diseases relating to pregnancy, eating disorder, sleeping disorder, seasonal depression, reproductive dysfunction, endocrine of seasonal circulatory disorders, diseases, various disorders caused by aging, cerebral circulatory disorder, shead trauma, spinal injury, epilepsy, anxiety, depression, manic depression, schizophrenia,

The present sequence represents a human Zven1 polypeptide. The Zven1 gene is present on chromosome 3p21.1-3p14.3. The specification also describes Zven2.2 zven polymorleotides and polypeptides are useful in veterinary and human therapeutics, for treating small cell cancer of the lung, to bromote wound healing, to prevent or to treat an adverse reaction of the promote wound healing, to prevent or a skin-iritating agent, to stimulate the immune system of an immunocompromised individual, as antitumour agents, as antiinflammatory agents, as agents to regulate regeneration or remodeling of tissue, as agents to modulate necrosis or tissue growth developmental arrest, to inhibit proliferation of tumour cells, cellular differentiation and necrosis, to treat disorders associated with gestrointestinal cell contractility, secretion of digestive enzymes and caids, and conditions associated with hypermotility such as
                                                                                                                                                                                                                                                                Zvenl; 3p21.1; 3p14.3; Zven2; small cell lung cancer; wound healing;

The present invention relates to a screening method for compounds for their ability to modify the binding of G-protein coupled receptor (GPCR) protein ZAQ and related proteins (human ZAQC, human ZAQT, rat ZAQ1 (rZAQ1), rZAQ2, human and mouse ISE (mISE) receptor, and mouse GPR73) to their ligands (the mature form of human, mouse or rat Bv8 protein). The receptor protein and ligand are conteacted in the presence or absence of the test compound. The compounds are useful in a drug composition for the treatment, and prevention of digestive and central nervous system (CNS) disorders, including bowel inflammation, diarrhoes a constipation, food
                                                                                                                                                                                                                                                  G-protein coupled receptor; GPCR; ZAQ; human; ZAQC; ZAQT; rat; ZAQ1; rZAQ1; rZAQ2; mouse; ISE receptor; mISE; GPR73; Bv8 protein, MIT1; digestive disorder; central nervous system disorder; CNS; diarrhoea; bowel inflammation; constipation; food absorption disorder; nootropic; Alzheimer's disease; Parkinson's disease; schizophrenia; laxative; antiinflammatory; antidiarrhoeic; neuroleptic; neuroprotective; receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                absorption disorders, Alzheimer's disease, Parkinson's disease and schizophrenia. The present sequence represents a GPCR or related protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Screening of compounds modifying the binding of G-protein coupled receptor protein ZAQ and related proteins to their ligands for use in treatment and diagnosis of digestive disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 AVITGACDKDSQCGGGMCCAVSIWVKSIRICTPMGKLGDSCHPLTRKVPFFGRRMHHTCP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ô
                                                                                                                                                                                                                                                                                                                                                                                                    The invention comprises a method for producing an active peptide that has the same activity as a ZAQ ligand isolated from eukaryotic cells. The method of the invention is useful for the production of a physiologically active ZAQ ligand for use in preventing or treating digestive diseases (e.g. colitis and diarrhea). The present amino acid sequence represents a human physiologically active ZAQ ligand-related protein
                                                                                                                                                                                                                                                                                                                                     Industrial production of physiologically-active ZAQ ligand by expressing in transformant prokaryote and refolding in redox buffer, for use in preventing or treating digestive diseases e.g. colitis and diarrhea.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9

                                                                                                                                                                                                                                                                                        stimulate gastrointestinal mooth muscle contraction and nucleic acid molecules encoding such polypeptides. Polypeptides of the invention are useful for treating disorders involving impaired gastrointestinal motility. They are useful for stimulating gastrointestinal motility in disorders such as irritable bowel syndrohe, diabetic gastroparesis, post operational ileus, chronic constipation and gastrointestinal reflux disease. The prokineticin antagonists are useful for inhibiting gastrointestinal motility in conditions of disractions motility in conditions of disractions and absorptive disorders, inflammatory bowel disorders, infectious diseases and intestinal cancers. The antagonists also act as analgesics. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            28 AVITGACDKDSQCGGGMCCAVSIWVKSIRICTPMGKLGDSCHPLTRKVPFFGRRMHHTCP

The present invention relates to a novel method of inducing proliferation of endothelial cells or enhancing cell survival, involving contacting the cells with Bv8 or introducing a nucleic acid encoding Bv8 into the cells cells with Bv8 or introducing a nucleic acid encoding Bv8 into the cells to inducing proliferation or endothelial of the cells. The method is useful for inducing proliferation of endothelial cells and to enhance cell survival, where the cells are vascular endothelial cells, especially steroidogenic endothelial cells. It is useful for inhibiting endothelial cell proliferation, for treating cancer (e.g., hormone-dependent cancer or cancer of the reproductive organs, especially testicular cancer) in commanians preferably human. The method of the invention is also useful for treating a condition is associated with hormone producing tissue which is elected from lipoid congenital adrenal hyperplasia, infertility, sexual maturation, androgen-dependent tumours, precocious puberty, adrenal-chypoplasia congenita, McCune-Albright syndrome and hypogonadotropic hypogonadism. The present sequence is human Bv8 homologue splice variant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Inducing proliferation of endothelial cells or enhancing cell survival, by contacting the cells with Bv8 or introducing nucleic acid encoding Bv8 into cells to induce proliferation or to enhance survival of the cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 AVITGACDKDSQCGGGMCCAVSIWVKSIRIĞTPMGKLGDSCHPLTRKVPFFGRRMHHTCP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated mucleic acid molecule (I) that encodes a Zvenl polypeptide. (I) is useful for inhibiting the proliferation of tumour cells, as probes or primers to clone 5 non-coding regions of a Zven gene, to direct the expression of heterologous gene in tissues of, for example, transgenic animals or patients treated with gene therapy, to detect the expression of a Zvenl or ZvenZ gene in a biological sample, to detect that modulate the response of a cherrophil to a pathogen, to determine whether a subject's chromosomes contain a mutation in the Zven gene, or to detect abstrations in Zvenl or ZvenZ joucus (I) is useful as educational tools, as laboratory practicum kits for courses related to genetics and molecular biology, protein chemistry and antibody production and analysis. The invention desribes an isolated Zvenl polypeptide comprising a sequence that is at least 70% identical to amino acid residues 23-108 of the 108-amino acid sequence and that binds with an antibody that specifically binds with a polypeptide comprising the sequence comprising 108 amino acids. The polypeptide has cytostatic properties and is useful in gene therapy. The protein is Zvenl procein and useful for preparing a composition for treating e.g. cancer. This sequence encodes the novel human polypeptide Zvenl encoded by a gene found on chromosome 3p21.1-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         PROK1; PROK2; G protein-coupled receptor 192; GPCR 192; ligand; cancer;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel angiogenesis inhibitor comprising a compound that inhibits the activity of an amino acid sequence given in the specification. Angiogenesis-related proteins Bv8, ZAQ and ISE were utilised within the method of the invention. The method of the invention demonstrate cytostatic and antiinflammatory activities whilst the method may be useful for treatment and prevention of cancer, ovarian diseases, diabetic retinopathy and inflammatory disease. The current sequence is that of the human Bv8-related protein of the invention.

                                                     Identifying an agonist or antagonist of G-protein-coupled-receptor 192, GPCR), useful for treating metabolic or immune disorders, or cancer comprises contacting GPCR 192 with a test compound, and detecting agonist or antagonist activity.
                                                                                                                               The present invention relates to a method of identifying an agonist or antagonist of G protein-coupled receptor (GPCR) 192, which comprises contacting GPCR 192 with a test compound, and detecting agonist or antagonist activity. The methods and compositions containing the agonist or antagonist are useful in the manufacture of a medicament for treating central nervous system, metabolic or immune disorders, or cancer. The present sequence is human provinction 2 (PROK2) as shown in the exemplification of the invention

The invention relates to novel prokineticin-like polypeptides and polynucleotides. The polynucleotide and polypeptide are useful in diagnostics. Foreniscs, gene mapping, drug screening, identification of mutations responsible for genetic disorders or traits, to assess biodiversity, and to produce many other types of data and products dependent on DNA and amino acid sequences. The polynucleotide and polypeptide may also be used for treating diseases due to impaired gastroparesis, irritable bowel syndrome or postoperation, diabetic gastroparesis, irritable bowel syndrome or postoperations ileus), for requiating angiogenesis and neovascularization, as well as growth and requiating angiogenesis and neovascularization, as well as growth and cavelopment in heart and other tissues, for treating sperm disorders including azoospermia, neurodegenerative diseases (e.g. Alzheimer's disease or parkinson's disease), autoimmune disorders (e.g. Alzheimer's disease or barkinson's disease), autoimmune disorders (e.g. rheumatcid arthritis, diabetes, allergy or asthma), wounds, cancer or infections. This sequence corresponds to a protein which has similarity to the novel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                human; Zven1; Zven2; prokineticin2; prokineticin1; G-protein coupled receptor; GPCR73a; GPCR73b; inflammation; intestine; inflammatory bowel disease; irritable bowel syndrome; ulcerative colitis;

                                                                                                                                                 The present sequence represents a human Zven1 polypeptide. Zven1 and Zven2 are also known as prokineticin2 and prokineticin1, respectively. Receptors for Zven1 and Zven2 have been identified as G-protein coupled receptors, GPCR73a and GPCR73b. The specification describes a method for reducing or treating inflammation in the intestine of a mammal, comprising administering a Zven1 or Zven2 antagonist to reduce the that binds Zven1 or Zven2 antagonist is preferably a receptor that binds Zven1 or Zven2. The method is useful for diagnosing or treating inflammatory bowel disease, irritable bowel syndrome, ulcerative colitis, or Crohn's disease.

```
The present invention describes an isolated human PRO polypeptide (1).

Also described: (1) an isolated PRO nucleic (II) acid encoding (I); (2) a vector (II) comprising (II); (3) a host cell (IV) comprising (II); (4) producing (I); (5) a chimeric molecule (V) comprising (II); (4) producing (I); (5) a chimeric molecule (V) comprising (II) theed to a composition of matter comprising (I) an agonist of (I), an antagonist of (I), or (VI) in combination with a carrier; (8) creating (MI) an immune related disease in a mammal, by administering (I), an agonist of (I), an antagonist of (I), or the antibody (VI); (9) diagnosing an immune related disease in a mammal, by detecting the level of expression of a gene encoding (I) in a test sample of tissue cells obtained from the mammal and in a control sample of known normal tissue cells of the same cell type; (10) identifying a compound that inhibits cells of the same cell type; (10) identifying a compound that inhibits cells of the activity of (I); (II) identifying a compound that inhibits the mammal, by administering (I) or its antagonist to the mammal. (I) has antianaemic, antiarthritic, antinflammatory, antipsoriatic, antianaemic, antiarthritic, antinflammatory, antipsoriatic, corecopathic and vasotropic activities. (I) and (VI) are useful for diagnosing an immune related disease in a mammal. (VI) is useful for the polypeptide. (MI) is useful for treating mammal having an immune correct lunds artheritis, seteoarthritis, seteoarthritis, seteoarthritis, seteoarthritis, seteoarthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       dermatitis, psoriagis, lymphadenopathy, splenomegaly and leukopaenia. The present sequence represents a human PRO protein from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         28 AVITGACDKDSQCGGGMCCAVSIWVKSIRICTPWGKLGDSCHPLTRKVPFFGRRMHHTCP 87
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         gastrointestinal; anabolic; gastrointestinal contractility;
gastric emptying; intestinal transit; gastroparesis; chemokine release;
neutrophil infiltration; appetite; weight gain; sensitization;
New isolated PRO polypeptide e.g. PRO37544, PRO69493, PRO87327 etc, capable of stimulating an immune response, useful for treating diseases such as rheumatoid arthritis, psoriasis, and leukopenia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 AVITGACDKDSQCGGGMCCAVSIWVKSIRICTPMGKLGDSCHPLTRKVPFFGRRMHHTCP

Human Bv8 homologue variant #2, SEQ ID 4.

```
The invention relates to the used of a polypeptide for modulating gastrointestinal contractility, gastric emptying or intestinal transit in a mammal, treating gastroparesis, stimulating or intestinal transit in stimulating neutrophil infiltration, inducing or increasing appetite or weight gain in a mammal, increasing or decreasing sensitization to a thermal mechanical or painful stimulus in a mammal, or inducing thermal mechanical or painful stimulus in a mammal, or inducing or thermal mechanical or painful stimulus in a mammal, the polypeptides and polymucleotides are useful for treating intestinal motility disorders and improving gastrointestinal function with Zvenl and ZvenZ and improving gastrointestinal function with Zvenl and ZvenZ contractility, gastric emptying or intestinal transit in a mammal, celease, stimulating neurophil infiltration, inducing or increasing appetite or weight gain in a mammal, increasing or decreasing cappetite or weight gain in a mammal, increasing or decreasing cor inducing vasculogenesis or angiogenesis in cardiac stem cells. cc associated with abnormal haematopoiesis or an autoimmune disorder in a mammal. The method comprises administering antegonists for Bv8 or mammal. The method comprises administering antegonists for Bv8 or mammal. Bv8 and EG-VEGF are homologies of Vascular Endothelial Growth Factor (EG-VEGF) to Endocrine Gland derived Vascular Endothelial Growth Factor (EG-VEGF) to Endocrine Gland derived Vascular Endothelial Growth CC Endocrine Gland derived Vascular Endothelial Growth CC Factor (VEGF), an angiogenic factor known to have an important role in tumour growth and survival. (M1) is useful for treating abnormal CC haematopoiesis such as a hematological disorder e.g., leukaemia, character myelodysplastic disorder. The leukaemia is a contemploral ferative disorder, or lymphodysplastic disorder. The leukaemia is useful for treating immunodeficiency disorder, is acute myelodysplastic leukaemia. (M1) is useful for treating immunodeficiency disorder, secondary immunodeficiency disorder, or condition associated with an infectious disease (HIV infection). The immunodeficiency disorder is a condition associated with an infectious disease (HIV infection). The immunodeficiency disorder, or myelodysplastic disorder. (M1) is useful for treating neutropenia, which is associated with an infectious disease (Cor treating neutropenia, which is associated with an infectious disease. Condition, autoimmune disorder such as inflammatory bowel disease, Crohn's disease. Collitis, luquas, multiple sclerosis, myaëthenia gravis, optic neutitis, psoriasis, rheumatoid arthritis, Graves Disease, autoimmune hepatitis, type I diabetes or aplastic anaemia. The present sequence is a human Bv8 colling sequences for human Bv8 due to alternative splicing of an exon that encodes a canonical heparin binding domain. The present sequence concept anaemia of the encodes a canonical heparin binding domain. The present sequence of encodes a canonical heparin binding domain. The present sequence concept and proper produces of the method of the inventure of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Treating disorder associated with abnormal hematopoiesis or autoimmune disorder by administering antagonist of small protein obtained from Bombina variegata or endocrine gland derived vascular endothelial growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              present invention relates to a method (M1) for treating a disorder
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 52; SEQ ID NO 4; 161pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            coding sequence of ADS00459 does not.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              factor, to mammal.

Zveni and Zven2 are also known as prokineticin2 and prokineticin1, respectively. Receptors for Zven1 and Zven2 have been identified as G-protein coupled receptors, GPRR31a and GPRR31b. The specification describes a method for reducing or treating inflammation in the intestine of a mammal, comprising administering a Zven1 or Zven2 antagonist to reduce the inflammation in the intestine. The antagonist is preferably a receptor that binds Zven1 or Zven2. The method is useful for diagnosing or treating inflammatory bowel disease, irritable bowel syndrome, ulcerative colitis, or Crohn's disease.
                                                                                                                                                                                                                                                                                                                                                           uuman, Zven1; Zven2; prokineticin2; prokineticin1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a screening method for compounds for their ability to modify the binding of G-protein coupled receptor (GPCR) protein ZAQ and related proteins (human ZAQC, human ZAQT, rat ZAQ1 (rZAQ1), rZAQ2, human and mouse 1Es (misB) receptor, and mouse GPR73) to their ligands (the mature form of human, mouse or rat BVB protein). The receptor protein and ligand are contacted in the presence or absence of the test compound. The crompounds are useful in a drug composition for the treatment, and prevention of digestive and central nervous system (CNS) disorders, including bowel inflammation, diarrhoea, constipation, food absorption disorders, Alzheimer's disease, Parkinson's disease and schizophrenia. The present sequence represents a GPCR or related protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel angiogenesis inhibitor comprising a compound that inhibits the activity of an amino acid sequence given in the specification. Angiogenesis-related proteins Bv8, ZAQ and ISE were utilised within the method of the invention. The molecules of the invention demonstrate cytostatic and antiinflammatory activities whilst the method may be useful for treatment and prevention of cancer, ovarian diseases, diabetic retinopathy and inflammatory disease. The current sequence is that of the human Bv8-related protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a screening method for compounds for their ability to modify the binding of G-protein coupled receptor (GPCR) protein ZAQC, human ZAQC, human ZAQT, rat ZAQI (rZAQI), rZAQ2, human and mouse 15E (m15E) receptor, and mouse GPR73) to their ligands (the mature form of human, mouse or rat BVB protein). The receptor protein and ligand are contacted in the presence or absence of the test compound. The compounds are useful in a drug composition for the treatment, and prevention of digestive and central nervous system (CNS) disorders, including bowel inflammation, diarrhoca, constibation, food absorption disorders, Alzheimer's disease, Parkinson's disease and schizophrenia. The present sequence represents a GPCR or related protein
                                                                                                                                                                                                                                  antiinflammatory; antidiarrhoeic; neuroleptic; neuroprotective; receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9

                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes human and rat brain-originated G protein-coupled receptor (GPCR) proteins. The GPCR sequences have antidiarrheic and laxative activities. The GPCR sequences can be used for developing drugs to treat diseases of the digestive organs, e.g. colitis, diarrhoea, constibation and malabsorption syndrome, including gene diagnosis and therapy. The present sequence represents a rat GPCR protein sequence, which is used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9

                                                                                                                                                             compound that inhibits the activity of an amino acid sequence given in the specification. Anglidenesis-related proteins BN9, ZAQ and ISE were utilised within the method of the invention. The molecules of the invention demonstrate cytostatic and antiinflammatory activities whilst the method may be useful for treatment and prevention of cancer, ovarian diseases, diabetic retinopathy and inflammatory disease. The current sequence is that of the rat BN8-related protein of the invention.

The invention relates to a method of screening for a compound for its ability to modulate circadian rhythm. The method involved determining the ability of a prokineticia 2 (PKZ) receptor agonist or antagonist to compound the solution of modulate one or more indicia or circadian rhythm function. The compound compound is identified as being a PKZ receptor agonist or antagonist by determining its effect on a predetermined signal such as calcium mobilisation produced by the interaction of PKZ and a receptor (e.g., ADO05355). The invention is based on the findings that PKZ expression in that PKZ receptor activation modulates direadian rhythm in rats. The invention also relates to a method of modulating the circadian rhythm of an animal by administration of a PKZ receptor antagonist; a composition comprising a detectably labelled PKZ and an isolated mouse CC an animal by administration of a PKZ receptor antagonist; or agonist; a composition comprising a detectably labelled PKZ and an isolated mouse CC a PKZ gene promoter (ADO05365-ADO05369) operably linked to a heterologous cricadian rhythm and for the light regulated expression of a mucleic acid methods of the invention are useful for identifying compounds for modulating circadian rhythm; such modulators include SC modulating circadian rhythm and PKZ promoter ADO05365. The promoter ADO05365 and manimal PKZ promoter ADO05365. The promoter adonists which are able to the Mana PKZ promoter ADO05365. The promoter adonists which are which are made and pKZ promoter ADO05365. The promoter adonists which are able to the MADO05365 and an additional promoter adonistion an

The circadian rhythm modulators may be used in the treatment of circadian rhythm disorders such as non-24-hour sleep-wake syndrome, rapid time-zone change syndrome (jetlag), work-shift syndrome, delayed phase sleep syndrome, advanced sleep phase syndrome, irregular sleep-wake seasonal affective disorder. They may also be used for modulating biological rhythms with a periodicity of less than 24 hours (ultradian rhythm) such as daydreaming, unination or hunger, or those with a periodicity of more than 24 hours (infardian rhythm) such as sexual receptivity (heat) in female animals. The present sequence represents the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              neurogenesis, prokineticin receptor; PKR; neural stem; progenitor cell; neural regeneration; Alzheimer's disease; Parkinson's disease; neurodegenerative disease; prokineticin 2; PK2.
Screening for compounds for modulating circadian rhythm, for treating seasonal disorders, comprises determining ability of prokineticin-2 receptor antagonist or agonist to modulate one or more circadian rhythm function indicia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 AVITGACDKDSQCGGGGMCCAVSIWVKSIRICTPMGKLGDSCHPLTRKVPFFGRRMHHTCP

                                                                                                                                                                                                                                                           The specification describes a method for identifying a compound that modulates neurogenesis. The method comprises providing a compound that modulates prokineticin receptor (PKR) signaling, contacting a neural stem cor progenitor cell with the compound, and determining the ability of the compound to modulate neurogenesis. The method is useful for modulating neurogenesis or for identifying compounds that modulate neurogenesis. These are used for both ex vivo or in vivo therapeutic applications where neural regeneration is desirable, such as in Alzheimer's disease, parkineno's disease or other debilitating neurodespenerative diseases. The used in the method of the invention to modulate neurogenesis.

The specification describes a method for identifying a compound that modulates neurogenesis. The method comprises providing a compound that modulates prokineticin receptor (PKR) signaling, contacting a neural stem or progenitor cell with the compound, and determining the ability of the compound to modulate neurogenesis. The method is useful for modulating neurogenesis or for identifying compounds that modulate neurogenesis. These are used for both ex vivo or in vivo therapeutic applications where neural regeneration is desirable, such as in Alzheimer's disease, parkinson's disease or other debilitating neurodegenerative disease. The present sequence represents rat prokineticin 2 (PKZ), which may be used in the method of the invention to modulate neurogenesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9

their ability to modify the binding of G-protein coupled receptor (GPCR) protein ZAQ and related proteins (human ZAQC, human ZAQT, rat ZAQ1 (rZAQ1), rZAQ2, human and mouse ISE (mISE) receptor, and mouse GPR73) to their ligands the mature form of human, mouse or rat BVB protein). The receptor protein and ligand are contacted in the presence or absence of the test compound; The compounds are useful in a drug composition for the treatment, and prevention of digestive and central nervous system (CNS) disorders, including bowel inflammation, diarrhoea, constipation, food
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     antiinflammatory; antidiarrhoeic; neuroleptic; neuroprotective; receptor
                                                                                                                                                                                                                                                                                                                                                            schizophrenia. The present sequence represents a GPCR or related protein
                                                                                                                                                                          The present invention relates to a screening method for compounds for their ability to modify the binding of G-protein coupled receptor (GPCR)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       G-protein coupled receptor; GPCR; ZAQ; human; ZAQC; ZAQT; rat; ZAQ1; rZAQ1; rZAQ2; mouse; ISE receptor; mISE; GPR73; Bv8 protein; MIT1; digestive disorder; central nervous system disorder; CNS; diarrhoea; bowel inflammation; constipation; food absorption disorder; nootropic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             27 AVITGACDKDSQCGGGMCCAVSIWVKSIRICTPWGQVGDSCHPLTRKVPFWGRRWHHTCP

                                                                                 The present invention relates to a screening method for compounds for their ability to modify the binding of G-protein coupled receptor (GPCR) protein ZAQ and related proteins (human ZAQC, human ZAQT, rat ZAQ1 (YZAQ1), rZAQ2, human and mouse ISE (MISE) receptor, and mouse GPR73) to their ligands (the mature form of human, mouse or rat BV8 protein). The receptor protein and ligand are contacted in the presence or absence of the test compound. The compounds are useful in a drug composition for the treatment, and prevention of digestive and central nervous system (CNS) disorders, including bowel inflammation, diarriboea, constipation, food absorption disorders, Alzheimer's disease, Parkinson's disease and schizophrenia. The present sequence represents a GPCR or related protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes human and rat brain-originated G protein-coupled receptor (GPCR) proteins. The GPCR sequences have antidiarrheic and laxative activities. The GPCR sequences can be used for developing drugs to treat diseases of the digestive organs, e.g. colitis, diarrhoea,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human and rat brain-originated G proteif-coupled receptor proteins and encoded DNAs, for developing drugs to treat diseases of the digestive organs, e.g. colitis, diarrhea, constipation and mal-absorption syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                    9

The present invention relates to a novel method of inducing proliferation of endothelial cells or enhancing cell survival, involving contacting the

```
cells with Bv8 or introducing a nucleic acid encoding Bv8 into the cells to induce proliferation or to enhance survival of the cells. The method is useful for inducing proliferation of endothelial cells and to enhance cell survival, where the cells are vascular endothelial cells, especially steroidogenic endothelial cells. It is useful for inhibiting endothelial cell proliferation, for treating cancer (e.g., hormone-dependent cancer or cancer of the reproductive organs, especially testicular cancer) in mammals preferably human. The method of the invention is also useful for treating a condition associated with hormone producing tissue in mammals, where the condition is associated with hormone producing tissue which is selected from lipoid congenital adrenal hyperplasia, infertility, sexual maturation, androgen-dependent tumnurs, precocious puberty, adrenal hypoplasia congenita, McCune-Albright syndrome and hypogonadorropic hypogonadism. The present sequence is mouse Bv8 homologue protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a novel angiogenesis inhibitor comprising a compound that inhibits the activity of an amino acid sequence given in the specification. Angiogenesis-related proteins Bv8, ZAQ and ISE were utilised within the method of the invention. The molecules of the invention demonstrate cytostatic and antiinflammatory activities whilst the method may be useful for treatment and prevention of cancer, ovarian diseases, diabetic retinopathy and inflammatory disease. The current sequence is that of the rat Bv8-related protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                              9

Angiogenesis-related proteins Bv8, ZAQ and ISE were utilised within the method of the invention. The molecules of the invention demonstrate cytostatic and antiinflammatory activities whilst the method may be useful for treatment and prevention of cancer, ovarian diseases, diabetic retinopathy and inflammatory disease. The current sequence is that of the murine Bv8-related protein of the invention.

The present invention relates to a method (M1) for treating a disorder associated with abnormal haematopolesis or an autoimmune disorder in a mammal. The method comprises administering antagonists for Bv8 or Endocrine Gland derived Vascular Endothelial Growth Factor (EG-VEGF) to the mammal. Bv8 and EG-VEGF are homologues of Vascular Endothelial Growth Factor (FG-VEGF), an angiogenic factor known to have an important role in Factor (VEGF), an angiogenic factor known to have an important role in tumour growth and survival. (M1) is useful for treating abnormal companies such as a hematological disorder e.g., leukaemia, cmyeloproliferative disorder, myelogyplatic disorder. The leukaemia complete myelofal leukaemia, cmyelogenous leukaemia, or acute companies of a south as primary immunodeficiency disorder. Ilymphodypplastic leukaemia, (M1) is useful for treating immunodeficiency disorder. Completed sprimary immunodeficiency disorder, prodition associated with an infections disease (HIV infection). The immunodeficiency disorder is a condition associated with an infections disease (Compelorative disorder is a condition associated with an infectious disease (Compelorative disorder is a condition associated with an infectious disease (Compelorative disorder is a sociated with an infectious disease (Contreatial infection). (M1) is useful for treating lymphopaenia or autoimmune disorder such as inflammatory bowel disease, Crohn's disease,
                                                                                                                                                                                                                                                                                                                                               Antipooriatic, Antiarthritic, Antirheumatic, Antithyroid; Hepatotropic; Antiolabelic, Antianemic, haematopolesis; autoimune disorder; Bv8; Endocrine Gland derived Vascular Endothelial Growth Factor; EG-VEGF; hematological disorder; leukaemia; myeloproliferative disorder; myelogyplastic disorder; lymphopyoliferative disorder; lymphopyoliferative disorder; immunodeficiency disorder; infection; neutropenia; bacterial infection; lymphopaenia; autoimmune disorder; inflammatory bowel disease; Crohn's disease; colitis; lupus; inflammatory bowel disease; Crohn's disease; colitis; lupus; rheumatoid arthritis; Graves Disease; autoimmune hepatitis; psoriasis; type I diabetes; aplastic anaemia; murine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Treating disorder associated with abnormal hematopoiesis or autoimmune disorder by administering antagonist of small protein obtained from Bombina variegata or endocrine gland derived vascular endothelial growth
                                                                                                                                                                                                                                                                                                                           Antinflammatory, Gastrointestinal, Neuroprotective, Muscular;

The method comprises providing a compound that modulates prokineticin receptor (PKR) signaling, contacting a neural stem or progenitor cell with the compound, and determining the ability of the compound to modulate neurogenesis. The method is useful for modulating neurogenesis or for identifying compounds that modulate neurogenesis. These are used for both ex vivo or in vivo therapeutic applications where
colitis, lupus, multiple sclerosis, myasthenia gravis, optic neuritis, postiasis, rheumatoid arthritis, Graves Disease, autoimmune hepatitis, type I diabetes or aplastic anaemia. The present sequence is a murine Bv8 sequence used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Identifying a compound that modulates neurogenesis comprises contacting a neural stem or progenitor cell with a compound that modulates prokineticin receptor signaling and determining its ability to modulate neurogenesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            neural regeneration is desirable, such as in Alzheimer's disease, barkinson's disease or other debilitating neurodegenerative diseases. The present sequence represents human prokineticin 2 (PK2) isoform 1, which may be used in the method of the invention to modulate neurogenesis.
                                                                                                                                                                                                                                                                                                                                                        9

The invention relates to novel prokineticin-like polypeptides and polymucleotides. The polymucleotide and polypeptide are useful in diagnostics, forensics, gene mapping, drug screening, identification of diagnostics, forensics, genetic disorders or traits, to assess biodiversity, and to produce many other types of data and product dependent on DNA and amino acid sequences. The polymucleotide and polymptide may also be used for treating diseases due to impaired gastrointestinal motility (e.g. chronic constipation, diabetic gastrointestinal motility (e.g. chronic constipation, diabetic gastroparesis, irritable bowel syndrome or postoperational ileus), for requilating angiogenesis and neovascularization, as well as growth and cevelopment in heart and oneovascularization, as well as growth and disease or Parkinson's disease, for treating sperm disorders including azoospermia, meurodegenerative diseases (e.g. Alzheimer's disease or Parkinson's disease), autoimmune disorders (e.g. rheumatoid arthritis, diabetes, allergy or asthma), wounds, cancer or infections. This sequence corresponds to a protein which has similarity to the novel proveneration.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Zigno Z., Henzel W.J.;
Protein Sci. 13:2819-2824(2004).
-!- FUNCTION: May function as an output molecule from the suprachiasmatic nucleus (SCN) that transmits behavioral circadian rhythm. May also function locally within the SCN to synchronize output. Potently contracts gastrointestinal (GI) smooth muscle.
-!- SUBCELLULAR LOCATION: Secreted.
                                                                                                                                                                                                                                                                                                                                  27 AVITGACDKDSQCGGGMCCAVSIWVKSIRICTPWGQVGDSCHPLTRKVPFWGRRMHHTCP

                                                                                                                                                                                                                                                                                                                                                                                                                           MEDLINE=22887296; PubMed=12975309; DOJ=10.1101/gr.1293003; MEDLINE=22887296; PubMed=12975309; DOJ=10.1101/gr.1293003; MEDLINE=22887296; PubMed=12975309; DOJ=10.1101/gr.1293003; Clark H.F., Gurney A.L., Abaya E., Baker K., Baldwin D., Brush J., Chow B., Chui C., Crowley C., Currell B., Deuel B., Dowd P., Eaton D., Foster J., Grimaldi C., Gu Q., Hass P.E., Heldens S., Huang A., Kim H.S., Klimowski L., Jin Y., Johnson S., Lee J., Lewis L., Liso D., Mark M., Robbie E., Sanchez C., Schoenfeld J., Seshagiri S., Simmons L., Singh J., Smith V., Stinson J., Vagts A., Vandlen R., Watanabe C., Wieand D., Woods K., Xie M.-H., Yansura D., Yi S., Yu G., Yuan J., Zhang M., Zhang Z., Goddard A., Wood W.I., Godowski P., Gray A.; The secreted protein discovery initiative (SPDI), a large-scale effort to identify novel human secreted and transmembrane proteins: a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Purcein Sci. 13:2819-2824./
-1- FUNCTION: Potently contract gastrointestinal (GI) smooth muscle.
-1- FUNCTION: Potently contract gastrointestinal (GI) smooth muscle.
Induces proliferation, migration and fenestration (the formation of membrane discontinuities) in capillary endothelial cells derived from endocrining glands. Has little or no effect on a variety of other endothelial and non-endothelial cell types.
-1- SUBCELLULAR LOCATION: Secreted.
-1- TISSUE SPECIFICITY: Expressed in the steroidogenic glands, ovary, testis, adrenal and placenta.
-1- SIMILARITY: Belongs to the prokinecitin family.
                                                                                                                                                                                                                                                                                     "Mambakine, a snake venom related endocrine hormone that controls
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Znang z., Henzel w.u.;

-!- FUNCTION: Inhibitor of Wht signaling pathway.
-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Placenta.
-!- SIMILARITY: Belongs to the dickkopf family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       EMBL; AB020314; BAA34651.1; JOINED.

-!- FUNCTION: Inhibitor of Wnt signaling pathway (Potential).
-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Highest expression in heart, brain, and spinal

"Characterization of terminally differentiated cell state by categorizing cDNA clones derived from chicken lens fibers.";
Int. J. Dev. Biol. 40:531-535(1996).
-! FUNCTION: Inhibitor of Wnt signaling pathway (By similarity).
-! SUBCELLULAR LOCATION: Secreted (Potential).
-! TISSUE SPECIFICITY: Expressed in eye lens.
-! SIMILARITY: Belongs to the dickkopf family.
                                                                                                                                                                                                                                                                                                                                                                                                                          20.5%; Score 94.5; DB 2; Length 215; 31.3%; Pred. Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).
-!- FUNCTION: Inhibitor of Wnt signaling pathway (Potential).
-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Highest expression in brain, eye and heart.
-!- SIMILARITY: Belongs to the dickkopf family.
